Computer Science graduate combining UX design, Frontend development & Machine Learning to build products rooted in how people think and interact with technology.

EDUCATION

B. Sc. in Computer Science Major & Psychology Minor

University of Manitoba

Feb 2026 | Winnipeg, MB

TECHNICAL SKILLS

Design & Research: Figma, User Research, Usability Testing, Cognitive Walkthroughs, Wireframing

Languages & Frameworks: Java, Python, JavaScript, TypeScript, React, Vite

Databases & Tools: MySQL, SQLite, Git, Docker, VS Code, Jira, Confluence

PROJECTS

OUTFITLY (PROTOTYPE) - Design Lead & Researcher, Human-Computer Interaction II Group Project

Figma, User Research, Usability Testing

- Led UX design for an AI-suggestive wardrobe app addressing outfit-decision fatigue and demand for styling inspiration without new purchases, producing wireframes and a Figma prototype across low to medium-fidelity iterations.
- Ran cognitive walkthroughs and usability testing with a 4-person team, identifying and resolving interface gaps to improve interface intuitiveness.
- Conducted interviews to define user requirements, shaping personalized feature decisions for the prototype.

QDOG WEBAPP - Frontend Developer & Design Lead, Software Engineering II Group Project

Typescript, React, Figma, Git

- Led UI/UX design for a cross-platform veterinary management app and produced wireframes and component specs in Figma.
- Translated design system into a responsive React frontend, collaborating with teammates on backend integration.
- Wrote Jest suites for core frontend components, ensuring reliability across owner and vet dashboard views.

OVATECH AI – Machine Learning & Frontend Developer, AI4Good Lab Project

Python, React, TypeScript, Vite, Figma, Git

- Built a CNN model (99% accuracy) to detect ovarian cysts from ultrasound images, for a PCOS support tool built in 2 weeks.
- Built the React, TypeScript & Vite frontend integrating the CNN alongside a teammate's Random Forest model (96% accuracy), then iterated on the interface usability through Figma prototype.
- Designed the interactive Figma prototype for the team's proposed mobile health app.

NETFLIX DATA MODELING & QUERY SYSTEM - Database Engineer, Databases Concepts & Usages Group Project

MySQL, Java

- Designed a relational MySQL database for Netflix analytics, handling 10,000+ records with optimized indexing and query performance.
- Built a Java data access layer to abstract and standardize database operations to avoid touching raw SQL.
- Resolved ID mismatches across 5 source datasets by engineering a mapping strategy to integrate them into a unified schema.

WORK EXPERIENCE

MACHINE LEARNING FELLOW, AI4Good Lab

May 2024 – June 2024 | Montreal, QC

- Completed a structured 6-week applied ML fellowship supported by Google DeepMind & the Mila Institute to gain hands-on experience with CNNs and model evaluation through weekly guided projects.
- Coordinated deliverables with a cross-functional team of data science, research, and design fellows against project milestones.

BEAUTY ASSOCIATE, Sally Beauty Holdings

May 2025 – Present | Winnipeg, MB

- Conducted structured needs assessments with customers to recommend tailored product solutions, hitting monthly sales target 85% of the months.
- Collaborated with team members during high-traffic periods to triage priorities and maintain service quality under pressure.

FASHION ASSOCIATE, Reitmans Canada

Aug 2022 – Present | Winnipeg, MB

- Applied consultative communication to guide diverse customers through complex product decisions, consistently achieving satisfaction and sales targets.
- Balanced multiple concurrent responsibilities while adapting to shifting operational priorities, maintaining strong cross-team coordination.
